1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The Title should provide a more detailed structural identification of the feature or features which distinguish the invention from the prior art. The intended results produced by the structural differences can also be part of the content of the Title.

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP §608.02(g).

Note; as in Fig. 2, already indicated as 'prior art', figure 1 only shows conventional structure and does not show any of applicant's inventive structure.

3. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the subject matter of Cls.8-9,15,16 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of

Art Unit: 2653

the application. The objection to the drawings will not be held in abeyance.

4. Claims 1-20 are rejected under 35 U.S.C. §112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The following phrase lacks a clear relationship with other claimed structure within the claim(claims); i.e. the particularly recited passage fails to either have its own function and/or be properly interrelated with other structure recited in the claim(s): is the "link" (e.g. Cl.1, line 4) related to either of the "drive link" or "quide link"?

An exhaustive search of indefinite and/or ambiguous language has not been attempted, but only exemplified in the preceding paragraphs. Therefore the applicant is responsible for a thorough review of all the claims to make corrections as appropriate.

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. §102 that form the basis for the rejections under this section made in this Office action:

Application/Control Number: 10/600,879

Art Unit: 2653

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Page 4

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 1-6,11,12,13&18 are rejected under 35 U.S.C. §102(b) as being anticipated by Rohart.

See Fig. 1. Note, to the extent claimed and understood, the structure as shown in Addendum A reads on and performs to the same degree as claimed.

Re Cl. 4; because the claim fails to specify what is meant by "flexible" and since all materials have some degree of elasticity or flexibility, Rohart's guide link is consistent with being a 'flexible' link.

7. Claims 1-6,11,12,13&18 are rejected under 35 U.S.C. §102(b) as being anticipated by the Japanese patent document (59-28216).

See Figs. 4-5. Note, to the extent claimed and understood, the structure as shown in Addendum B reads on and performs to the same degree as claimed.

Re Cl. 4; because the claim fails to specify what is meant by "flexible" and since all materials have some degree of elasticity or flexibility, the Japanese patent document's guide link is consistent with being a 'flexible' link

- 8. The following is a quotation of 35 U.S.C. §103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 8,9,15,16 are rejected under 35 U.S.C. §103(a) as being unpatentable over Rohart or the Japanese patent document (59-28216) as applied to claims 1-6,11,12,13&18 above, and further in view that the use of ball bearings are notoriously

Art Unit: 2653

old in the art as devices to rotatably support one element relative to another.

Therefore, official notice is taken that it would be obvious to use same in either Rohart or the Japanese patent document's device for rotatably supporting the links.

10. For a complete response applicant should identify how the claimed structure of his invention defines over **all** the art of record.

Moreover, where the applicant disagrees with the reasoning and/or application of the prior art on critical points of the claims, they should identify how the claimed structure of their invention defines over **all** the art of record not just the applied art.

Where applicant believes that the art is redundant and/or superfluous relative to the critical aspects of the claimed invention the applicant may simply state so in rebuttal summary.

11. Claims 7,10,14&17 would be allowable if rewritten to overcome the rejection under 35 U.S.C. §112 set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Application/Control Number: 10/600,879 Page 7

Art Unit: 2653

12. Claims 19&20 would be allowable if rewritten or amended to overcome the rejection under 35 U.S.C. §112 set forth in this Office action.

- 13. If applicant has filed an information disclosure statement prior to one month before the mailing date of this office action and this instant office action does not contain an initialed-off copy (or copies) of all such filed IDS's (or at least a comment to the disposition of such IDS'S in the body of the office action itself) applicant should apprise the examiner of such missing documentation [to the IDS's] in response to this office action so that the examiner can take appropriate action to supply same to the applicant.
- 14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to A. J. HEINZ whose telephone number is (703) 308-1544. The examiner can normally be reached on M-F 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, WILLIAM KORZUCH can be reached on (703) 305-6137. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
